Annex A

- i. All cavity barriers tested to, or generally in accordance with, either BS EN 1366-4:2006+A1:2010 or BS EN 1366-4:2021
- ii. All brackets to be suitably fixed to substrate with non-combustible fixings, or brackets are mortared into brick coursing
- iii. All brackets to penetrate product at mid-thickness
- iv. All brackets to penetrate to a depth of 75% of the gap width
- v. Galvanised steel brackets or stainless-steel brackets
- vi. Brackets must be installed at 600mm centres based on a 1200mm strip. This can be reduced pro rata for shorter lengths. Please note that 2 brackets are required for any length of barrier over 250mm. For lengths ≤ 250 mm a single bracket can be utilized
- vii. Friction fit - product should be sized equal to void width and installed with no gaps. Product supplied in strip form will have a -0mm/+4mm tolerance
- viii. The inclusion of DPC will not impact the performance of the product

Annex B

Horizontal EW-FS120 – Test Report 516527/R - refer to the following masonry support angle penetrations and drawings:

Consideration must be made for heat transfer through the support angles, particularly for Specimens A & B, and the placement of combustible materials adjacent to them.

Specimen A:

Masonry Support Angle fully penetrating the product and protruding the unexposed face by 18mm

Specimen B:

Masonry Support Angle fully penetrating the product, flush with the unexposed face and protruding the exposed face by 15mm

Specimen C:

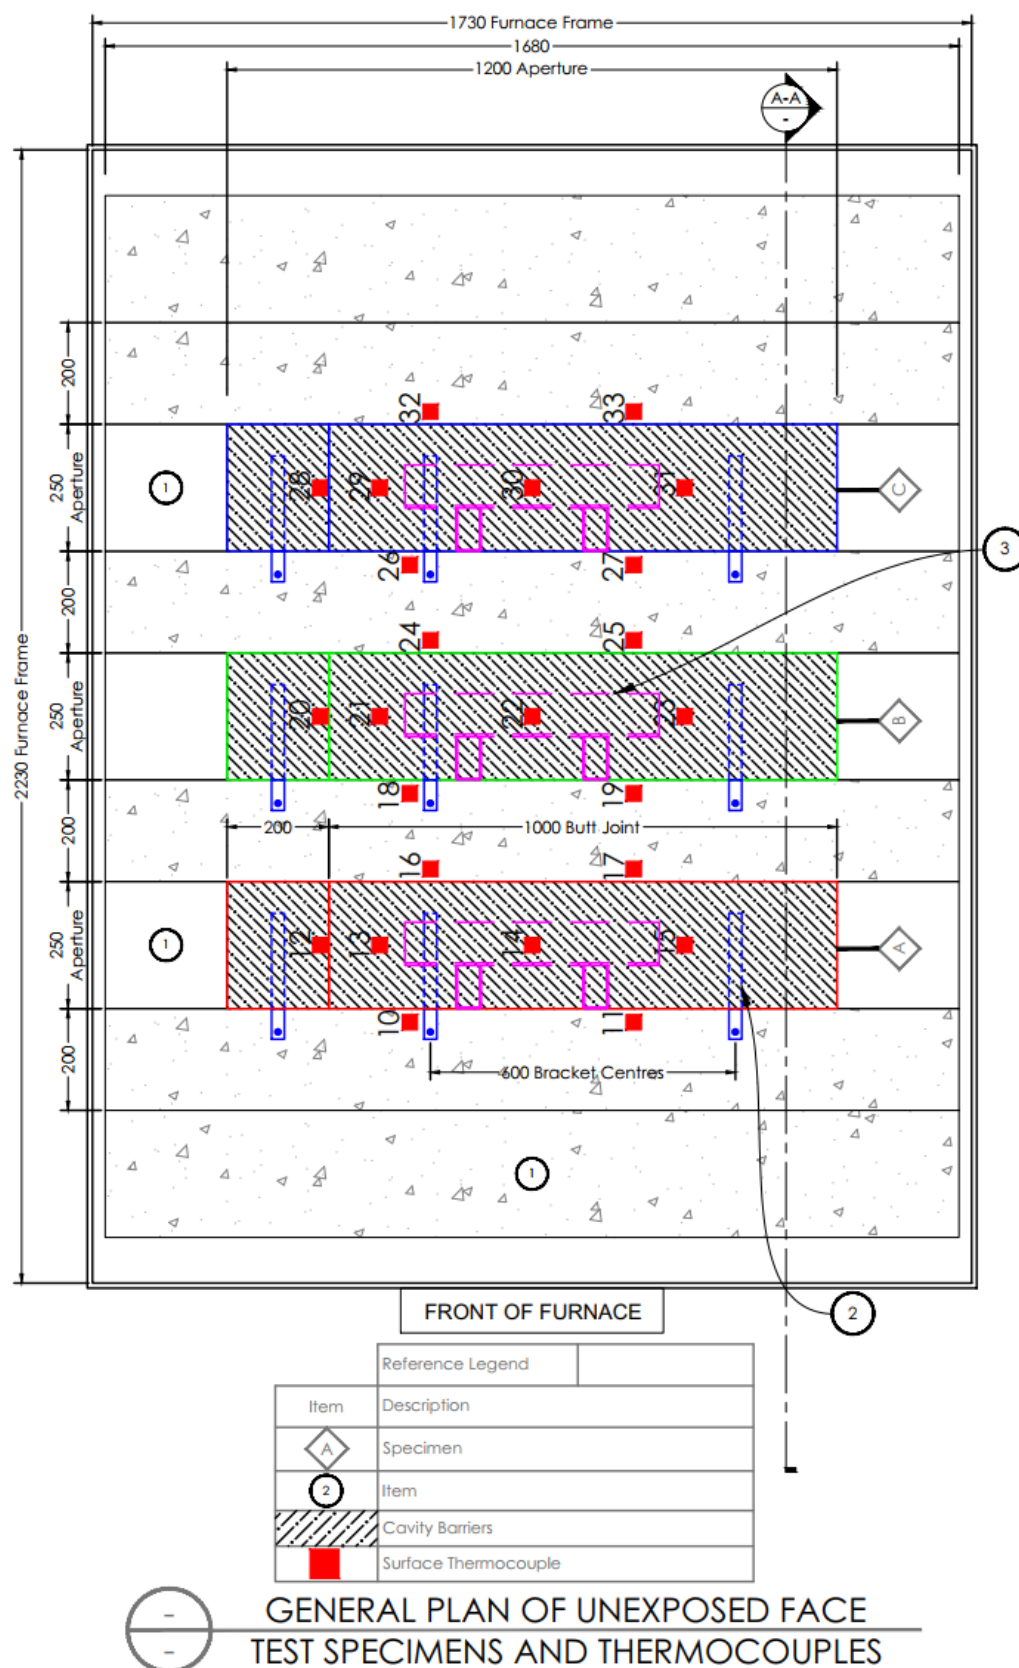

Masonry Support Angle penetrating the product by 50% and protruding the exposed face by 75mm
